Claim Rejections - 35 USC § 102(e)

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 46-50, 55, 57-60 are rejected under 35 U.S.C. 102(e) as being anticipated by Tang et al. (reference submitted by Applicant; WO 02/074961 A1).

Tang et al. teach a polypeptide that is 100% identical to instant SEQ ID NO:2. Tang et al. teach methods for treating medical conditions which comprises the step of administering to a mammalian subject a therapeutically effective amount of a composition comprising a polypeptide of the present invention and a pharmaceutically acceptable carrier (page 5, lines 18-

21; page 34, lines 19-21 and page 76, lines 11-30). Tang et al. teach that a composition of the present invention is useful for treatment of lung or liver fibrosis (page 55, lines 24-26). Tang et al. teach that if the protein is made in yeast or bacteria, it may be necessary to modify the protein produced therein, for example by phosphorylation or glycosylation of the appropriate sites, in order to obtain the functional protein. Such covalent attachments may be accomplished using known chemical or enzymatic methods (page 31, lines 27-31). Tang et al. teach fusion proteins of the instant invention (page 21, lines 17-20; page 38, lines 1-10; page 39, line 20-page 41, line 5). Tang et al. teach that the fusion protein can be an immunoglobulin fusion protein in which the polypeptide sequences according to the invention comprise one or more domains fused to sequences derived from a member of the immunoglobulin protein family (page 40, lines 7-11). Tang et al. teach that the proteins may be fused to cytokines alpha or beta interferon (page 39, lines 30-31). Tang et al. teach that it is contemplated that interferons may be administered in combination with the polypeptide of the invention (page 77, lines 13-21). Tang et al. teach that the polypeptide and exogenous factors may be administered simultaneously, sequentially or separately (pages 77-79 and 85).
